

For Sound Advice, Listen to Stroma...

FREE CPD
followed by
one hour
of **FREE**
consultation
only with
Stroma

In preparation for the 2010 changes to Section 5 of the Technical Handbook, Stroma is offering one hour of FREE CPD followed by one hour of FREE consultation.

Legislation such as EcoHomes, BREEAM and Building Bulletin 93 (BB93), and the imminent changes to Section 5 of the Technical Handbooks, will make acoustic compliance a prerequisite for many developments in Scotland, both domestic and non-domestic.

With over 20 years of experience in the field collectively, Stroma's UKAS accredited acoustic team is expert in the requirements and what it takes to meet them; we can therefore significantly reduce the risk of non-compliance.

Working independently from suppliers and manufacturers, we have provided testing and consultancy on more than 1000 projects throughout the UK and Ireland.

Building Sustainability & Compliance

Our Service Offering:

Acoustic Design Consultations

If engaged at an early enough stage, we can provide design reviews or workshops, liaising closely with the architect or design team to ensure that compliance criteria are established and taken into consideration from the outset. Extensive knowledge of building types and the construction process means we are ideally placed to assess product suitability and identify improvement strategies where necessary.

Preliminary Testing

We offer preliminary onsite testing to ensure that a development is on target to meet the required specification.

Final Testing

We undertake final testing to satisfy the relevant legislation. Our engineers are dispersed nationwide, enabling us to keep lead times to a minimum and offer highly competitive fees. All reports are guaranteed within 24 hours, reducing the risk of handover delays, and we also operate a secure online archiving area where clients can log in and download reports for all their projects, both current and completed.

STROMA[®]

Acoustic testing forms just part of Stroma's offering...

Air Leakage Testing

As a leading UKAS, ATTMA and BINDT accredited testing body, we are experts in air tightness. We provide a full testing and consultancy service, from design reviews and preliminary audits to final acceptance testing and, in the event of test failure, leakage diagnosis.

Sustainable Design

RIBA chartered practice Stroma Design offers a full architectural service and a range of compliance consultancy for both new developments and retrofit schemes.

EcoHomes and BREEAM

We are experienced in delivering the design advice and assessments required to achieve target EcoHomes and BREEAM levels. We encourage our involvement from the initial stages of design development when we can identify cost-effective and appropriate measures to be incorporated seamlessly into the construction process. Thus we can minimise risk and potential expenditure.

Acoustic Sealing

Whether a client-driven specification or stipulated by legislation, Stroma's BRE accredited contracting division can assist in the achievement of the required sound reduction and decibel (dB) rating through the installation of acoustic blankets, barriers and seals.
