

Case Study

Ashby Crescent, Consett

Code for Sustainable Homes Assessments

Clients Requirements

An affordable, repeatable procurement method and strategy to achieve Code level 4 to be piloted on 4 new CSH homes.

Stroma design's contribution

Stroma has been appointed by design-build contractor Southdale to provide full architectural services and sustainable design consultancy. Integral to the design process, we have developed a future model for affordable Code level 4 housing built to the strict requirements of housing association properties.

Having satisfied the client's requirements, this project has gained planning permission and is due to commence on site shortly. Stroma's continued role will involve ensuring that the development meets the required Code level and that the technical design allows for efficient construction and results in a healthy internal environment for the occupants.
