

Case Study: Historic Buildings

Client: Amphitheatres - Minack Theatre Trust

Location: Porthcurno, Cornwall

Summary:

The Minack Theatre, carved out of the granite cliff tops over 80 years ago, is one of the world's most famous outdoor amphitheatres in a truly stunning setting.

Stroma Building Control (formerly BBS Building Control) has been appointed Building Control by RLT Architects of Penzance. RLT and Stroma Building Control worked together on the complete re-build of the actors' changing room facilities back in 2010-2011. This latest scheme involves alterations to the backstage facilities building by extending the roof at second floor level with a new pitched roof and creating a third floor storage area.

We are delighted to be involved, once again, with The Minack Theatre Trust and RLT architects on such a unique project and location.
